20/05/2025 10:30		Meeting: NOPSEMA and Woodside. Attendees: (NOPSEMA), (Woodside). Meeting notes: Intent of meeting was for NOPSEMA to gather further information to support the IVT14016 investigation. chaired meeting and provided legislative context, inspection objectives, inspection scope, next steps, and asked questions regarding each element of the scope. Details of discussions to be captured in Investigation Report (A1209024). Key outcome was that Woodside is suspending the activity until 'summer' 2025; aligning with State and EPBC approvals such that both State and Commonwealth removal activities will be undertaken outside of southern right whale peak calving (May to October), therefore earliest commencement November 2025. However, contractual discussions are still underway with Subsea 7, therefore this may change (indication was that it could be 2026 rather than 2025). This extended timeframe will allow for control measures to be refined to ensure that impacts and risks from lost saddles are reduced to ALARP.
