**Subject:** Pressure in 13-5/8" x 20" annulus of P3

Hi [REDACTED],

We have noticed some pressure in the 13 5/8" x 20" annulus in the BT-P3 well. The nature of the pressure was investigated during the weekend and below are some facts to date. I would like to discuss with you as to whether this is reportable and if so, which category of the notification form is applicable.

1. The pressure is circa 650psi. It has a subtle decreasing trend.
2. The pressure was initially bled off in 9min. Gas observed from the annulus. The annulus was shut in the moment liquid was observed. The first build-up trend is attached to this email.
3. We will look to take a sample so that the nature of the bled off gas will be analysed to understand the source.
4. **s 47 - commercial value**

5. The MAASP for the 13-5/8 x 20" annulus is 1,513psi.

6. **s 47 - commercial value**

7. The 13 5/8" cement report has been provided as part of the weekly performance standard reporting on 13-Jan-2023. The more detailed cement report is attached. **s 47 - commercial value**

8. **[REDACTED]**

9. Bleeding off pressure has been done only once. **s 47 - commercial value**

10. **s 47 - commercial value**

11. We have tested wellhead side outlets and annular seal assembly. We will engage with the OEM (TPFMC) to seek further advice on managing this and possible improvements to the equipment.

Our Senior Petroleum Engineer will be onboard the rig tomorrow and will investigate further.

Regards
