Subject: RE: Dropped Object Investigation/Inspection 2040: Emergency Shutdown Event on Northern Endeavour [SEC=UNCLASSIFIED]
Attachments: SNE-Office-19063021260.pdf

Hello [REDACTED]

A Process shutdown (PSD) occurred.... Not an emergency shutdown (EDS). Hence no muster or emergency systems were triggered.

Sequence as follows:

03:12 hrs – Full process shutdown (PSD 2.3;2.2;2.1) – pressurised shutdown

No PA/GA

Investigation into trip identified (this is located up on the turret on the common line to supply gas lift down hole – downstream of the gas lift compressors)... See attached for transmitter failure record.

Plant recovery operations were on-going without issue 23:00 hrs

Regards

UNCLASSIFIED

[REDACTED]

during yesterday's meeting we recorded that an emergency shutdown event could have led to vibration that may have dislodged the corroded pipe support that supporting the pipe in the LP flare header. Could you briefly outline what you understand to be the cause of the emergency shutdown event and whether there was a facility muster involved?
